

JS8Call - How do I reply to a CQ Call?

There are a few options here, in this section we will cover the "REPLY" one found in the menu.

So you've spotted a station calling CQ and want to reply? Great, communicating is what JS8Call is all about! Right Click on the callsign either on the Activity pane, or the heard stations pane which will select the callsign (the row will turn blue) then select the "Directed to <CALLSIGN>" option (where <CALLSIGN> will be replaced by whatever one you picked).

Now click the "REPLY" menu option, what happens next is that JS8Call Will look in your settings and get the text you put in the Reply Message text box, this is HW CPY? by default but you can change it to anything you want. Remember, you don't need to enter your callsign – JS8Call will add this for you. If you want to add some more to the reply go ahead and enter it now, once you are done hit the send button. Thats it, your message is on the way!
